(54) Title: METHOD AND ARRANGEMENT FOR ASSIGNING NAMES TO DEVICES IN A NETWORK

WO 2004/064329 A1

(57) Abstract: A device arrangement for a network, and particularly a home network (1), comprises a plurality of devices (2) that can be actuated electronically by a user, and particularly consumer electronics devices, building control devices, home entertainment electronics devices and/or network control devices. Each device (2) has a name memory (6) in which is stored a device name uniquely assigned to the device (2), to enable the particular device (2) to be uniquely actuated within the network (1). The device name stored in the name memory (6) can be individually selected and/or changed by the user by means of a mobile input unit (3) that has a short-range electronic data link to a device (2).
